

Recycling is as easy as 1, 2, 3! Here's how it's done.

1

Drain your oil into a reusable, sealable (screw-type) container, such as a milk jug, a water jug, or a specialized oil drainer.

2

Take it to a recycling center. The center has agreed to help out by accepting used oil and oil filters from do-it-yourselfers. There the oil is picked up for recycling. (If you don't find a collection center near you ask your full service station or oil change center if they will take your used oil and oil filter.)

3

When buying motor oil, ask your dealer for re-refined motor oil. Buying recycled products is an important part of recycling.

Important:

Don't mix other wastes with used oil. These mixtures can create hazardous substances and make recycling more difficult.

Recycling Centers are conveniently located throughout Bryan-College Station. Check this list for the center nearest you.

Bryan Municipal Service Center

1111 Waco Drive
Bryan, TX
209-5675

Williams Lube King

1791 Briarcrest Drive
Bryan, TX
776-8200

Williams Lube King

111 Southwest Parkway
College Station, TX
695-9894

What happens when you recycle?

Oil

Used motor oil can be recycled. It can be collected and re-refined. Re-refined oil is as good a lubricant as new oil. Out of a 42-gallon barrel of crude oil, you can get only 2 1/2 quarts of new motor oil. While recycling just one gallon of used motor oil will yield the same 2 1/2 quarts.

Oil Filters

Used oil filters can be made into rebar fence posts and other steel products.

Remember

Do your part. It's up to you! Ask for re-refined oil when purchasing motor oil for your next oil change.

**Of all Americans
who change their
own oil, only 10%
of them dispose of
their waste oil in
the proper manner.
Recycle used oil.**

In College Station, an estimated 200,000 gallons of used oil are dumped improperly down the sewers, in empty lots, in holes in the ground, on weeds, and in landfills. All by people who change their own oil. Used oil and oil filters are banned from the landfill and dumping is illegal. Recycling is the only legal method of disposal.

A single quart of oil will foul the taste of 250,000 gallons of water. And as little as one pint of used oil can create an acre-sized slick on surface water. Oil kills the floating organisms in fresh water that feed fish, and it kills aquatic life.

We cannot afford to have our drinking water contaminated. Every one of us has to share the responsibility for transforming used oil from a liability into a major asset.

Don't Forget:

*You can make a difference!
If you change your own oil,
don't dump it. Recycle it!*

**You
can make a
difference!
If you change
your own oil,
don't dump
it.**

Recycle it!
